

Royal visit to ReSolved Technologies

2024-03-05

Visit Her Majesty the Queen to ReSolved Technologies

On March 5th, her majesty Queen Máxima visited the Brightlands Chemical Campus to learn more on about the materials and energy transition here at the campus to become fully circular and sustainable by 2050.

ReSolved Technologies had the honour to present its goals and ambition to the Queen.

ReSolved Technologies unique solvent-based recycling technology allows complex plastic waste streams, for example blends, to be purified so these can be re-used in high-end applications. Purification is the key to enable circularity and we wish to demonstrate this by realizing a demonstration plant within the coming years.
